RUGGED RIDGE RELEASES NEW ADJUSTABLE REAR TRACK BAR AND RELOCATION BRACKET FOR 2007-2018 WRANGLER JK

Two Options Offered to Maintain Differential Alignment in Lifted Jeeps

Suwanee, Ga. (February 6, 2018) - [Rugged Ridge®](#), a leading manufacturer of high-quality Jeep®, truck and off-road parts and accessories, today announced the release of both a new Adjustable Rear Track Bar as well as a Rear Track Bar Relocation Bracket for 2007-2018 Jeep Wrangler JK / JKU models.

Engineered to effectively address issues with differential alignment in vehicles with suspension lifts installed, the Rugged Ridge Adjustable Rear Track Bar gives JK enthusiasts the ability to adjust the rear track bar length to compensate for suspension lifts ranging from two and a half to five inches.

Constructed of high strength forged steel to stand up to the rigors of off-road use, each Adjustable Track Bar features a durable black powder coated finish and urethane bushings for improved control and stability on the road with an extremely robust adjustment sleeve for greater versatility.

Additionally, Rugged Ridge has released a Rear Track Bar Relocation Bracket designed to accurately reposition the factory JK rear track bar to help restore proper wheel tracking on lifted JK Wranglers. Built from four-millimeter-thick plate steel and beautifully powder coated to resist corrosion, each bracket is precision formed for ease of install on the 2007-2018 Wrangler JK with two positions for a tailored fitment.

The Rugged Ridge Adjustable Rear Track Bar and Rear Track Bar Relocation Bracket are backed by Rugged Ridge's industry-leading five-year limited warranty and are available online and through select Jeep and off-road parts and accessories retailers.

For more information about Rugged Ridge Adjustable Track Bar and Bracket, or its complete line of high-quality Jeep and off-road products, or to find an approved retailer, please contact Rugged Ridge at 770-614-6101 or visit www.RuggedRidge.com.
